

# REX

## *Number Resource EXplainer*

Mark Dranse  
RIPE NCC  
[markd@ripe.net](mailto:markd@ripe.net)

# *“All you ever wanted to know about an Internet Number Resource”*

Imagine a tool which tells you:

- Who is responsible for an IP block / AS number
- If the resource is used ...
- Seen in routing tables ...
- Where it is used ...
- ....

Both present **AND** historic states ....

# Utopia?

- Not entirely
- RIPE NCC has a lot of data
  - RIPE database
  - Internal registration data
  - Reverse DNS delegations (RIPE region)
  - Routing Information Service (10 years of collected BGP data)
- And there's more publicly available
  - RIR delegation statistics
  - Geolocation
  - Blacklists / spamlists
  - ....

# The Idea

Based on *current data* amended by *data collected specifically* for this purpose we could develop a **new service** which:

- Provides **comprehensive, interpreted information** about historic and current state of specific resources (IPv4, IPv6 addresses & AS numbers)
- Could be a **one-stop-shop** for all who seek information about the resources
- Can deliver information **specialised** towards different user groups
- Fulfils part of our "**Trusted Source of Data**" mission

# Motivation

- We observe a *clear need* for a service where:
  - History and current **status of resources** can be looked up
  - Information from many sources are **combined** and **explained**
- Some reasons are
  - Growing use of recycled / transferred resources
  - Proliferation of resource abuse
  - Supporting resource management activities

# Current Status

- NCC Science Group have implemented a prototype
  - Fully functional, publicly available
  - First focus is on content
  - Currently digs into:
    - Routing information (10 years of RIS BGP table dumps)
    - RIPE Database (7 years of transaction history)
    - RIR delegation stats
    - Geolocation (maxmind's geolite)
    - Blacklists (uceprotect, spamhaus drop)
    - CAIDA IPv4 DNS-names

# RIPE NCC Information Services

- Routing Information Service (RIS)
  - Collects BGP data
  - 600+ peers
  - 16 Internet Exchange Points
  - <http://www.ripe.net/ris>

- Test Traffic Measurements (TTM)
  - Measures delay and loss
  - Stores traceroute data
  - Full mesh ~80 nodes
  - <http://www.ripe.net/ttm>

- DNSMON - <http://dnsmon.ripe.net> - Monitors 225 DNS servers

### RIPE Labs - What's it All About?

Search query here 

**RIPE Labs** is a new platform designed by the RIPE NCC for network operators, developers and industry experts to expose, test and discuss innovative Internet-related tools, ideas and analysis that can benefit the RIPE community and RIPE NCC members.

It's the place to showcase new and interesting things. Anyone can:

- Present research
- Showcase prototype tools
- Share operational experience
- Exchange ideas

Even if you don't have any new ideas at the moment, but are interested in reviewing the ideas and tools of others, please dive in.

**RIPE Labs** is a platform **from** the RIPE community **for** the RIPE community.
